

Lens Carousel Vision

julia

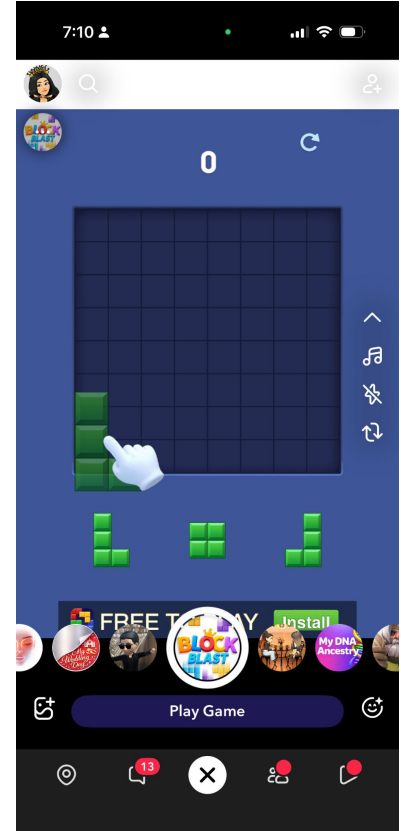

There's a lot of new
Lens content formats
that are getting added
to carousel...

Choose Your Own Adventure
Stories

Longer-form Games

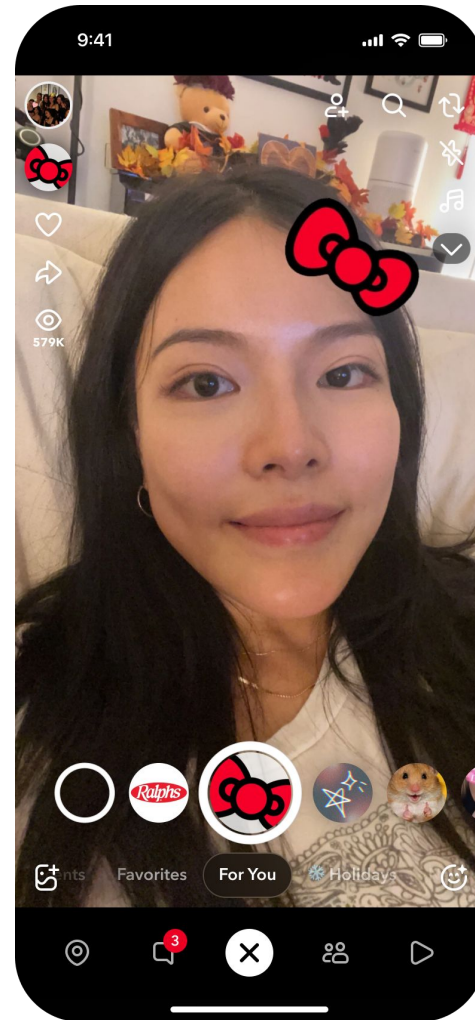

Playable Ads

Let's align on a content strategy for
carousel going forward....

The Camera should be for creation.

Everything that shows up here should help drive creation, specifically:

- Snap Creates
- Snap Sends
- Snap Posts
- Snap Saves

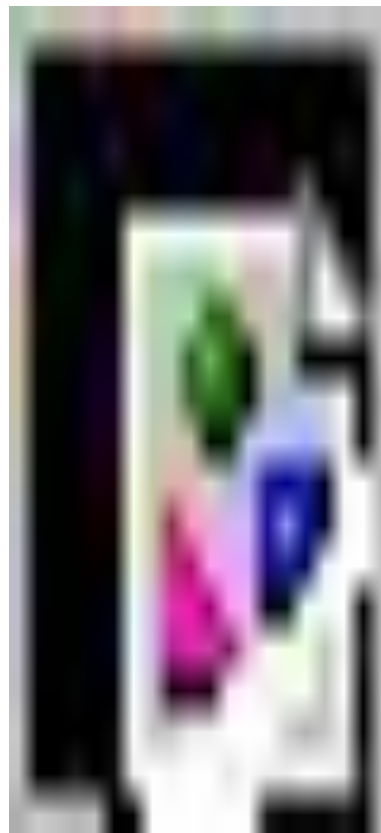

That means long-play
content (including
games) should have a
home elsewhere

Unless

They drive creation,
sends/posts

Choose Your Own Adventure
Stories

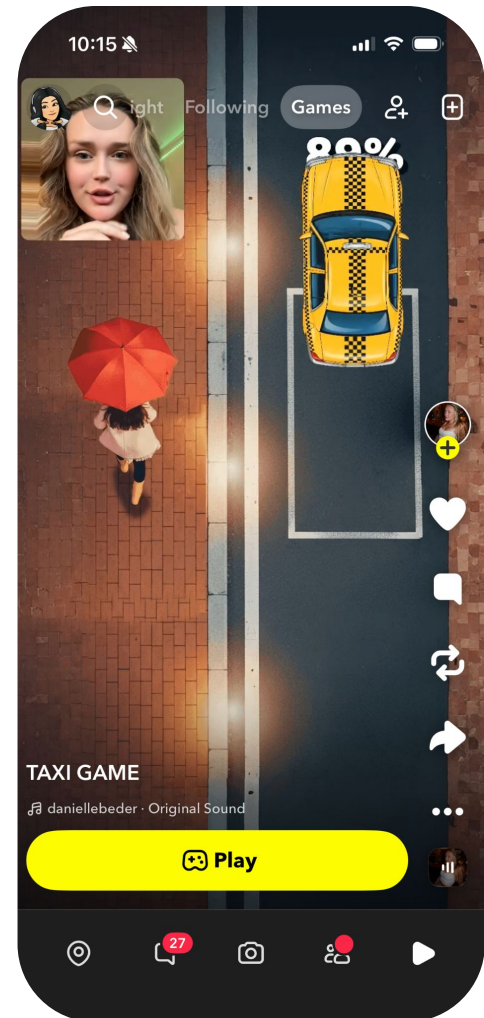

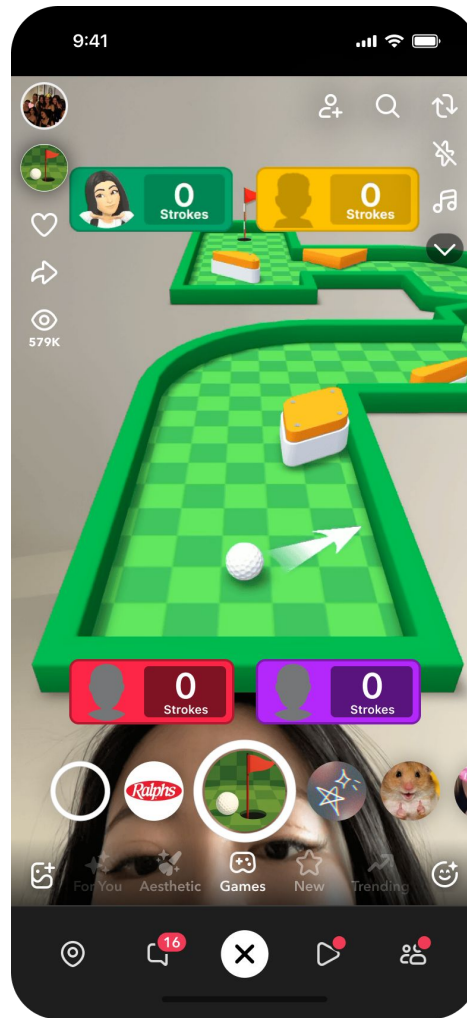

Longer-form Games

Playable Ads

For example:

We have games that drive sends and posts, and these may still make sense in carousel.

Similarly, this content *could* belong in carousel IF they have a mechanic to drive sends/posts.

Choose Your Own Adventure
Stories

Longer-form Games

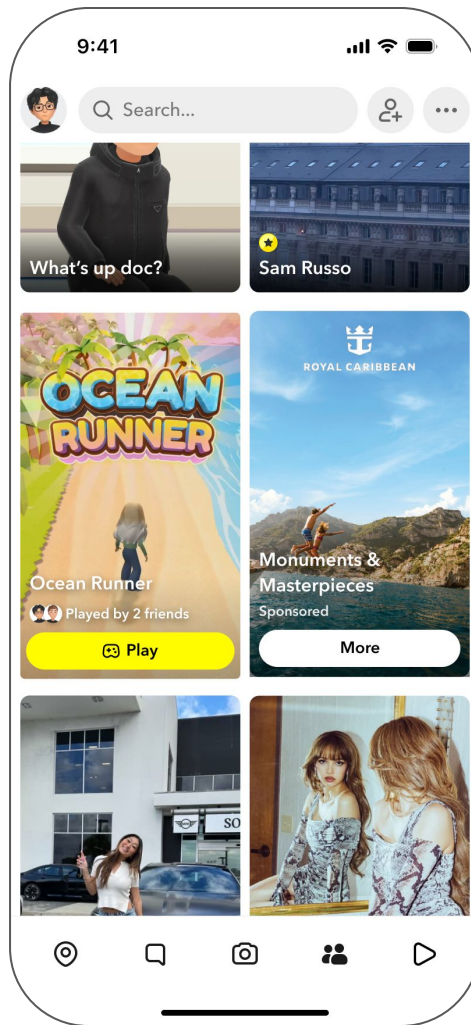

Playable Ads

Long term, as we shift to a GenAI personalized camera, we will need a more permanent home for this type of Lens content

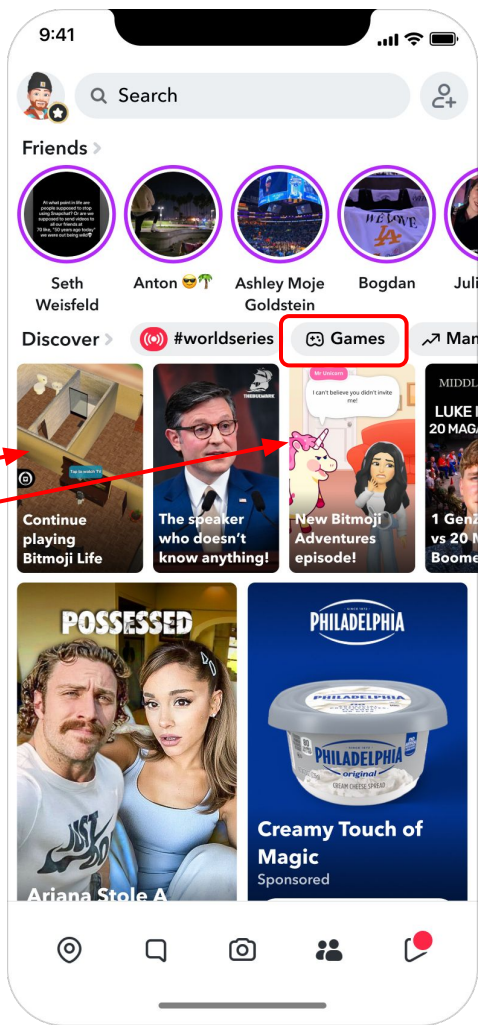

We're already working on Games in Discover and Spotlight, but:

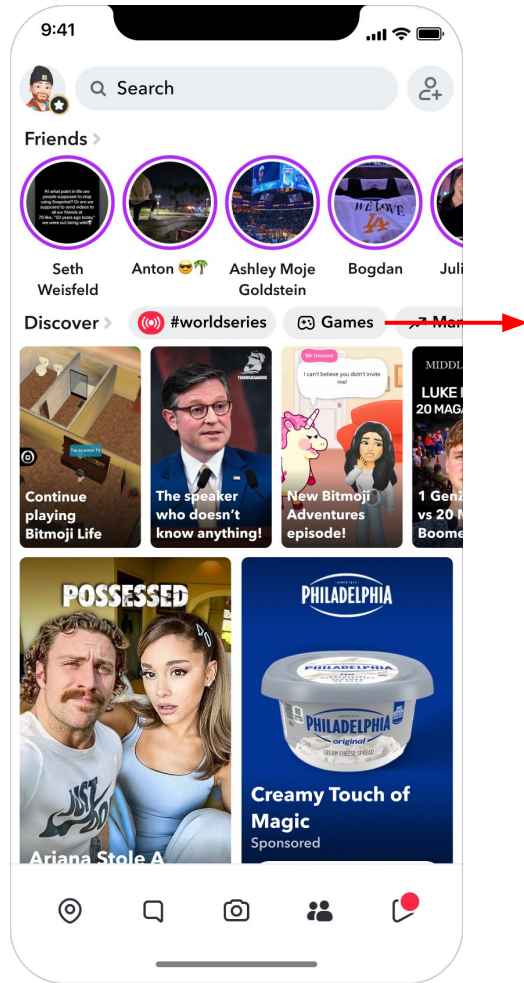

- They're relatively buried
- There's no way to browse like I can on Camera

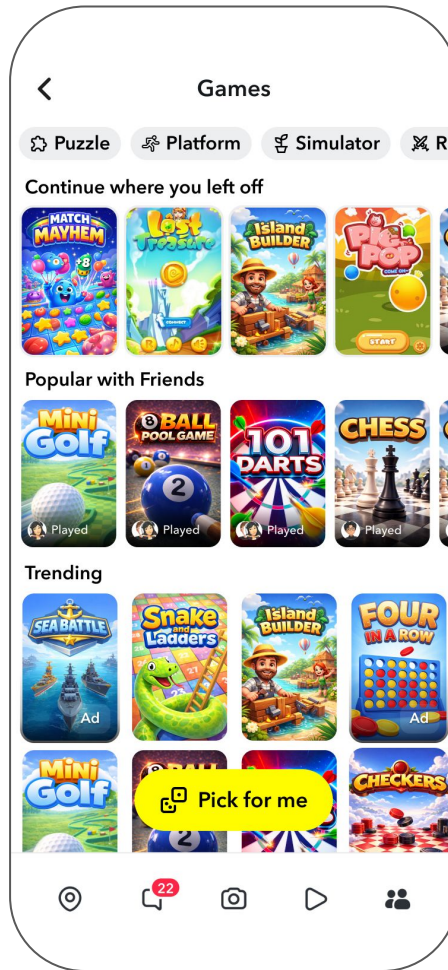

Top level entry point
to the Games
Spotlight tab on
Discover?

Inject games/interactive
content you are
following so you can
quickly pick up where
you left off

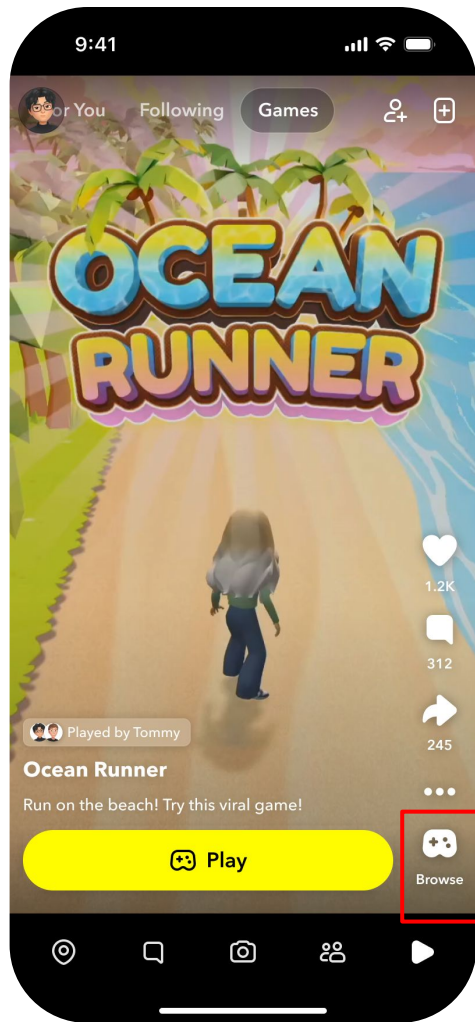

Option 1

Option 2

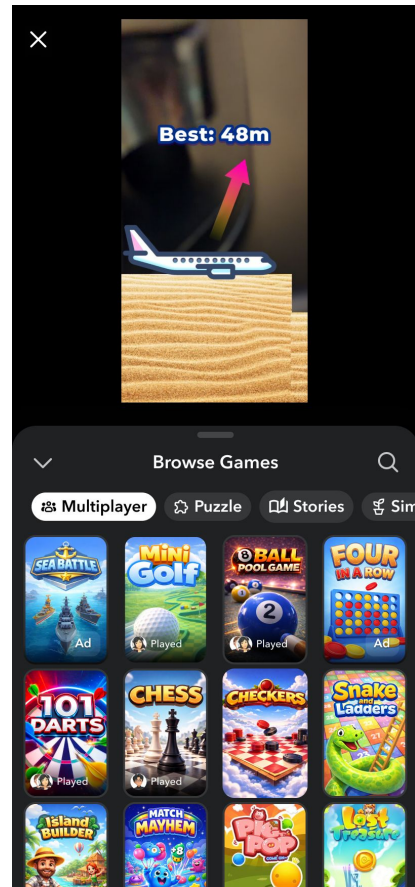

Entry point to browse Games
(and other content) in
content views

If Story and Snap unlocks open straight to the game in fullscreen...

We can add an entry point to browse in the fullscreen experience

FF shortcut for all game activity + a way to browse more games to play with friends
